RECLAMATION PLAN CHECKLIST

Lack of the following information may delay the processing of a Reclamation Plan Application. Draft Reclamation Plans should be included at the time of application submittal.

RECLAMATION PLANS SHALL INCLUDE:

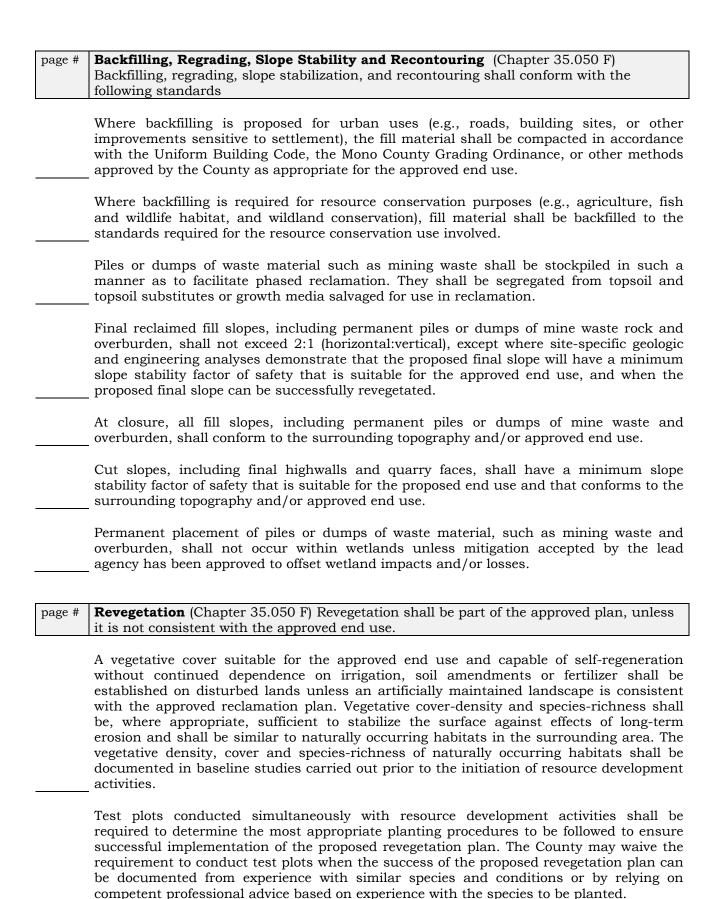

- **q** Completed application and checklist.
- q Deposit for project processing: See Development Fee Schedule.
- q Environmental Review (CEQA): See Development Fee Schedule for Negative Declaration and Environmental Impact Report (EIR) (for initial study only).
- q Draft Reclamation Plan and electronic copy in Microsoft Word.
- q Financial assurance estimate by a qualified professional.
- q Adequate site plan for the mining and reclamation phase of project.

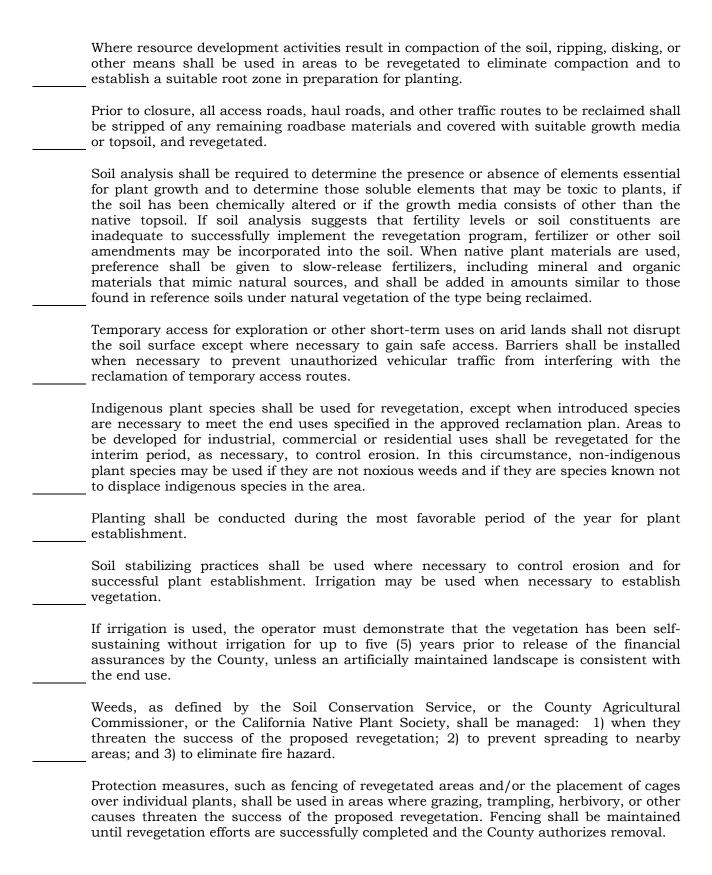

RECLAMATION PLAN REQUIREMENTS:

The Surface Mining and Reclamation Act of 1975 (SMARA) and Mono County General Plan Chapter 35, Reclamation, provide standards and procedures for reclamation of resource development activities in Mono County. All Reclamation Plans submitted shall conform to applicable verifiable standards.

List the page numbers from the draft Reclamation Plan where the following General Plan Chapter 35, "Processing Reclamation Plans," standards have been addressed.

page #	Wildlife Habitat (Chapter 35.050 F) Wildlife and wildlife habitat shall be protected in accordance with the following standards:
	Rare, threatened or endangered species or species of special concern, as defined by the California Department of Fish and Game, U.S. Forest Service, Bureau of Land Management, or the U.S. Fish and Wildlife Service, and their respective habitat shall be conserved as prescribed by the federal Endangered Species Act of 1973, 16 U.S.C. section 1531, and the California Endangered Species Act, Fish and Game Code section 1900, et seq. If avoidance cannot be achieved through the available alternatives, mitigation shall be proposed in accordance with the rules and regulations of the California Department of Fish and Game, U.S. Forest Service, Bureau of Land Management, the U.S. Fish and Wildlife Service, the U.S. Army Corps of Engineers and other applicable agencies.
	Wildlife habitat shall be established on disturbed lands in a condition similar to or better than that, which existed before the lands were disturbed, unless the proposed end use precludes its use as wildlife habitat or the approved reclamation plan establishes a different habitat type than that which existed prior to disturbance.
	Wetland habitat shall be avoided. Any wetland habitat impacted as a consequence of resource development activities shall be mitigated at a minimum of a one-to-one ratio for wetland habitat acreage and wetland habitat value.

Success of revegetation shall be judged based upon the effectiveness of the vegetation for the approved end use, and by comparing the quantified measures of vegetative cover, density, and species-richness of the reclaimed lands to similar parameters of naturally occurring vegetation in the area. Either baseline data or data from nearby reference areas may be used as the standard for comparison. Quantitative standards for success and the location(s) of the reference area(s) shall be set forth in the approved reclamation plan. Comparisons shall be made until performance standards are met provided that, during the last two years, there has been no human intervention, including for example, irrigation, fertilization, or weeding. Standards for success shall be based on expected local recovery rates. Valid sampling techniques for measuring success shall be specified in the approved reclamation plan. Sample sizes must be sufficient to produce at least an 80 percent confidence level.

Drainage, Diversion Structures, Waterways and Erosion Control (Chapter 35.050 F) Reclamation activities shall be conducted to protect on-site and downstream beneficial uses of water in accordance with the Porter-Cologne Water Quality Control Act, Water Code Section 13000 et seq., and the Federal Clean Water Act, 33 U.S.C. Section 1251 et seq. The quality of water, recharge potential, and storage capacity of groundwater aquifers shall not be diminished, except as allowed in the approved reclamation plan. Erosion and sedimentation shall be controlled during all phases of construction, operation, reclamation, and closure of an operation to minimize siltation of lakes and watercourses, as required by the Regional Water Quality Control Board, the State Water Resources Control Board, and the Mono County Grading Ordinance. Surface runoff and drainage shall be controlled by berms, silt fences, sediment ponds, revegetation, hay bales, or other erosion-control measures, to ensure that surrounding land and water resources are protected from erosion, gullying, sedimentation and contamination. Erosion control methods shall be designed to handle runoff from not less than the 20-year/one-hour intensity storm event. Where natural drainages are covered, restricted, rerouted or otherwise impacted, mitigating alternatives shall be proposed and specifically approved in the reclamation plan to assure that runoff shall not cause increased erosion or sedimentation. When stream diversions are required, they shall be constructed in accordance with: 1. Applicable stream and lake alteration agreements between the operator and the Department of Fish and Game: and 2. The requirements of the Federal Clean Water Act, Sections 301 (33 U.S.C. Section 1311) and 404 (33 U.S.C. Section 1344) and/or section 10 of the Rivers and Harbors Act. When no longer needed to achieve the purpose for which they were authorized, all temporary stream channel diversions shall be removed and the affected land reclaimed.

page #	Other Agricultural Land (Chapter 35.050 F) The following standards shall apply to agricultural lands, other than prime agricultural lands, when the approved end use is agriculture.
	In addition to the standards for topsoil salvage, maintenance, and redistribution, non-prime agricultural lands shall be reclaimed so as to be capable of sustaining economically viable production of crops commonly grown in the surrounding areas.
page #	Building, Structure and Equipment Removal (Chapter 35.050 F)
	All equipment, supplies, and other materials shall be stored in designated areas (as shown in the approved reclamation plan). All waste shall be disposed of in accordance with state and local health and safety ordinances.
	All buildings, structures and equipment shall be dismantled and removed prior to final site closure except those buildings, structures and equipment approved in the reclamation plan as necessary for the end use.
page #	Stream Protection, Including Surface and Groundwater (Chapter 35.050 F)
Lage "	
	Surface and groundwater shall be protected from siltation and pollutants that may diminish water quality as required by the Federal Clean Water Act, sections 301 et seq. (33 U.S.C. section 1311), 404 et seq. (33 U.S.C. section 1344), the Porter-Cologne Act, section 13000 et seq., the County Grading Ordinance, the Regional Water Quality Control Board or the State Water Resources Control Board.
	In-stream surface mining operations shall be conducted in compliance with Section 1603 of the California Fish and Game Code, section 404 of the Clean Water Act, and section 10 of the Rivers and Harbors Act.
	Surface mining activities in stream or river channels shall be regulated to control channel degradation in order to prevent undermining of bridge supports, exposure of pipelines or other structures buried within the channel, loss of spawning habitat, lowering of groundwater levels, destruction of riparian vegetation, and increased stream bank erosion (exceptions may be specified in the approved reclamation plan). Changes in channel elevations and bank erosion shall be evaluated annually using records of annual extraction quantities and benchmarked annual cross sections and/or sequential aerial photographs to determine appropriate extraction locations and rates.
	In accordance with requirements of the Department of Fish and Game, in-stream mining activities shall not cause fish to become entrapped in pools or in off-channel pits, nor shall they restrict spawning or migratory activities.
,,	
page #	Topsoils Salvage, Maintenance and Redistribution (Chapter 35.050 F) When the approved reclamation plan calls for revegetation or cultivation of disturbed lands, the following performance standards shall apply to topsoil salvage, maintenance, and redistribution activities:
	All salvageable topsoil suitable for revegetation shall be removed as a separate layer from areas to be disturbed. Topsoil and vegetation removal shall not precede development activities by more than one year, unless the County approves a longer time period.

	Topsoil resources shall be mapped prior to stripping and the location of topsoil stockpiles shall be shown on a map in the reclamation plan. If the amount of topsoil needed to cover all surfaces to be revegetated is not available on site, other suitable material capable of sustaining vegetation (such as subsoil) shall be removed as a separate layer for use as a suitable growth media. Topsoil and suitable growth media shall be maintained in separate stockpiles. Test plots may be required to determine the suitability of growth media for revegetation purposes.
	Soil salvage operations and phases of reclamation shall be carried out in accordance with a schedule that: 1) is set forth in the approved reclamation plan; 2) minimizes the area disturbed; and 3) is designed to achieve maximum revegetation success allowable under the mining plan.
	Topsoil and suitable growth media shall be used to phase reclamation as soon as can be accommodated by the operations schedule presented in the approved reclamation plan. Topsoil and suitable growth media that cannot be utilized immediately for reclamation shall be stockpiled in an area where it will not be disturbed until needed for reclamation. Topsoil and suitable growth media stockpiles shall be clearly identified to distinguish them from waste dumps. Topsoil and suitable growth media stockpiles shall be planted with a vegetative cover or shall be protected by other equally effective measures to prevent water and wind erosion and to discourage weeds. Relocation of topsoil or suitable growth media stockpiles for purposes other than reclamation shall require prior written approval from the County. Topsoil and suitable growth media shall be redistributed in a manner that results in a
	stable, uniform thickness consistent with the approved end use, site configuration, and drainage patterns.
page #	Tailing and Waste Management (Chapter 35.050 F)
	State Water Resources Control Board mine waste disposal regulations in Article 7 of Chapter 15 of Title 23, California Code of Regulations, shall govern mine waste and tailings, and mine waste disposal units shall be reclaimed in conformance with this article.
	Geothermal drilling waste and cuttings shall be disposed of in a manner approved by the Lahontan Regional Water Quality Control Board.
page #	Closure of Surface Openings (if applicable, see Chapter 35.050 F)
	or (agr and)
page #	Prime Agriculture Land Reclamation (if applicable, see Chapter 35.050 F)
