

## Sept. 16-19 2019 Community Health Improvement Plan Workshops

**Thank you for your participation in the Community Health Needs Assessment. Survey results have been analyzed and the final report is available to the public.**

Mammoth Hospital and Mono County Health Department worked collaboratively to develop the 2019 Mono County Community Health Needs Assessment (CHNA), with consultants Health TechS3, and the input from community members and key stakeholders. The four priority areas which will be addressed moving forward include:

- **Substance Abuse**
- **Dental Care/Oral Health**
- **Behavioral Health**
- **Clinical Care Access/Prevention**

The next step is to complete the **Community Health Improvement Plan (CHIP)**, which will include goals and interventions of how to improve community health in the 4 priority areas chosen. We will be hosting 4 workshops, one for each priority, the week of September 16, 2019. Please attend any workshops pertinent to your organization's work or of personal interest, and ideas of how you and your organization can help improve health in each of these areas. This is a collaborative process, and we will all need to work together to drive change in these areas. We look forward to seeing you at one or more of the workshops!
